

Our Solutions, Your Edge

GLOBAL QA

Corpac's own skilled QA team inspects and oversees quality at every step. From mill through delivery, our skilled engineers, manufacturers and logistics experts work together to ensure integrity, compliance and timely delivery.

TURNKEY SOLUTIONS

Our comprehensive inventory and global network of mills enable us to fulfill your requirements with immediate availability for a wide range of sizes and grades, as well as to provide global mill sourcing for specialized projects.

SPECIAL SERVICES

We provide coatings, galvanizing, beveling, threading, slotting, cut-to-length, bends, quench and temper, fabrication, double jointing and on-site assistance.

CROSSOVER DISTRIBUTION MODEL

Corpac provides a range of services spanning the global supply chain by integrating the roles of manufacturers, trading companies, distributors and logistics providers.

SUPPLY CONTRACTS

JUST IN TIME PROGRAMS

We design these predetermined delivery schedules specifically for each customer, to meet product flow, while safeguarding on-site stock depletion and minimizing storage space and costs. Deliveries can be set to single, multiple or roving locations based on project needs.

Products & Services

CONSTRUCTION PRODUCTS

When a construction job requires pipe and steel, general contractors, construction managers and other purchasers rely on Corpac. Our wide range of products comes with decades of experience, industry expertise and an unwavering commitment to quality. Corpac oversees every aspect from fabrication to logistics and delivers what you need to the site, on schedule and on budget.

Corpac's line of structural products and services includes flat steel and shapes for the assembly, erection and construction of on-shore and off-shore projects both in the energy and civil construction sectors. They are primarily steel plates, wide flange beams, square and rectangular pipe, as well as seamless and welded steel pipe. Products are manufactured in accordance with international standards and specifications for their specific applications.

Steel Pipe and Sheet Piles

Engineered for load-bearing applications, our steel pipes and sheet piles deliver superior tensile strength and driving properties, ideal for retaining walls and deep foundations in heavy civil construction.

Structural Pipe

Our structural pipes feature high yield strength and elasticity to support substantial loads, essential for major infrastructural frameworks.

Steel Beams and Shapes

Our precision-engineered steel beams, channels and angles, optimized for high-stress applications, provide essential support and flexibility in construction of complex frameworks and heavy-duty structures.

Plates and Sheets

Our plates and sheets are fabricated to meet exacting standards of strength and durability, ensuring optimal performance in structural, architectural, and mechanical applications.
